— AWARENESS MONTH —

Making 2021 The Year of Healing

8th Annual Wound Care Awareness Week

Support the Growing Need for

Wound Care Awareness: June 7-11, 2021

**Chronic wounds currently affect nearly
7 million people in the United States.**

As our population ages and conditions such as diabetes and vascular disease increase, more people are at risk for non-healing wounds.

Early Detection and Advanced Wound Care Are Essential

Non-healing wounds limit quality of life and even life expectancy. If left untreated, non-healing wounds can lead to severe complications. Delays in care have caused the amputation rates to rise during the pandemic.

.....

**Help us spread the message of wound prevention, early
identification and the need for advanced wound care.**

Visit WoundCareAwareness.com for patient resources and community education materials. Use #WoundCareAwareness on your social media marketing.
